

Arrays An array is a **Collection of Elements of Same Data Types**
and **Stored in a Continous Memory Allocation**

Modules And Package

Module **Collection of Functions**
Package **Collection of Modules**

Creation of Array

Syntax

Array Package

```
Array-Name = array( ' Specifier ' , [ V1 , V2 , V3 ] )
```

Array
Module

```
Array-Name = array-obj . array( ' Specifier ' , [ V1 , V2 , V3 ] )
```

Specifier

- **Format Specifier** for indicates the array contain same Data

i	-	int
l	-	Long int
f	-	Float
b	-	Character

Package **array**

Module **array**

Function **array()**

Using Array Package

```
from array import array  
a=array('i',[1,20,30])  
print(a)  
#array('i', [10, 20, 30])  
for i in a:  
    print(i)  
1  
20  
30
```

Using Array Module

```
import array as ai  
a=ai.array('i',[1,20,30])  
print(a)  
print(type(a))  
#array('i', [1, 20, 30])  
#<class 'array.array'>
```

Python Collections

Heart

A Collection is a Group of Elements which are may be Same Data Type of Different Data Type and we are not sure those Elements are Stored in a Contiguous Memory Locations.

Properties of a Collection

Collection Name	Ordered / UnOrdered	Mutable / Immutable	Allow Duplicates / Not Allow Duplicates
List	Ordered	Mutable	Allow Dups
Tuple	Oredred	Immutable	Allow Dups
Set	UnOredred	Immutable	Not Allow Dups
Dictionary	Ordered	Mutable	Not Allow Dups

Ordered [10 , 20 , 30]

OP 10 20 30

OP 20 30 10

Allow Duplicates / Not

[10 20 30 40 20]

Mutable (Changable)

[10,20,30]
